

Operating System (OS) Investigation

macOS Monterey 12.3

1. Investigate the features that OS offers by visiting 'Preferences' sections of your OS setting.
2. Open a new folder.
3. Create a file and store the file in the previously created folder.
4. Rename the folder that you create.
5. Rename the file you created.
6. Check the properties of the newly opened folder and the file.

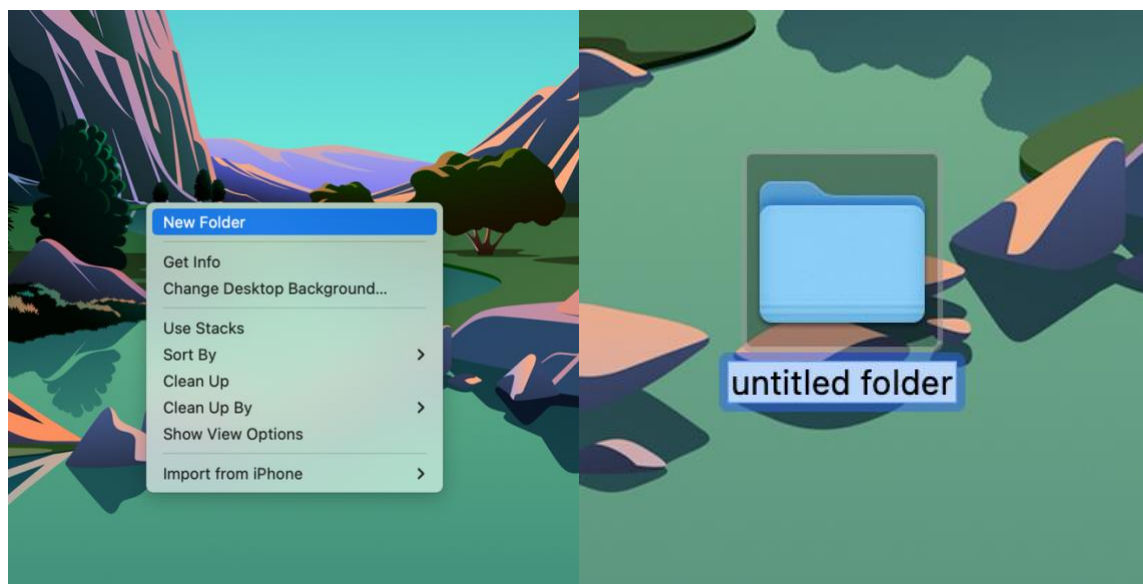

1. MacOS Preferences

On the System Preferences, you can change any settings of the computer. Preferences show you categories of preferences by icon, such as General, Desktop & Screensaver, Dock & Menu Bar. On the top, you can see your name and information about the user of

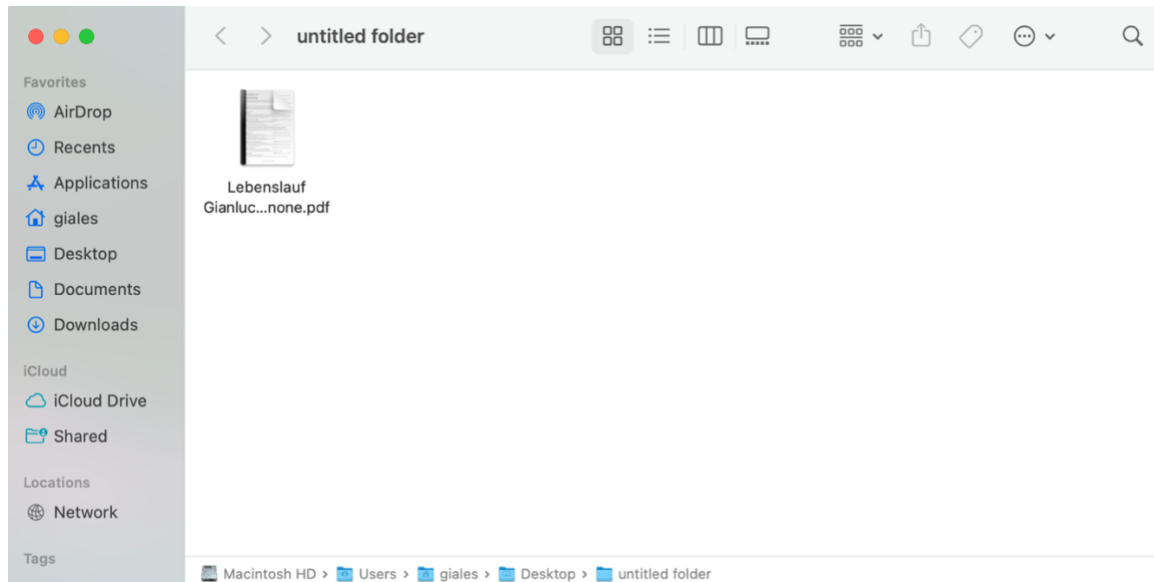

the Mac account. Moreover, you can manage your Apple ID, iCloud and other Apple services on the Apple ID settings. The view of the preferences can be customized individually. Whether hiding or changing the order, it is your choice. For instance, you can set the web browser's default in the General settings. You can also only search for the default web browser setting on the search button. It will lead you to the general setting automatically. Ultimately, for some settings, you need the authorization of the mac owner, like in the Security and Privacy setting. There is a lot more than what you see at the top level.

2. Open a new folder

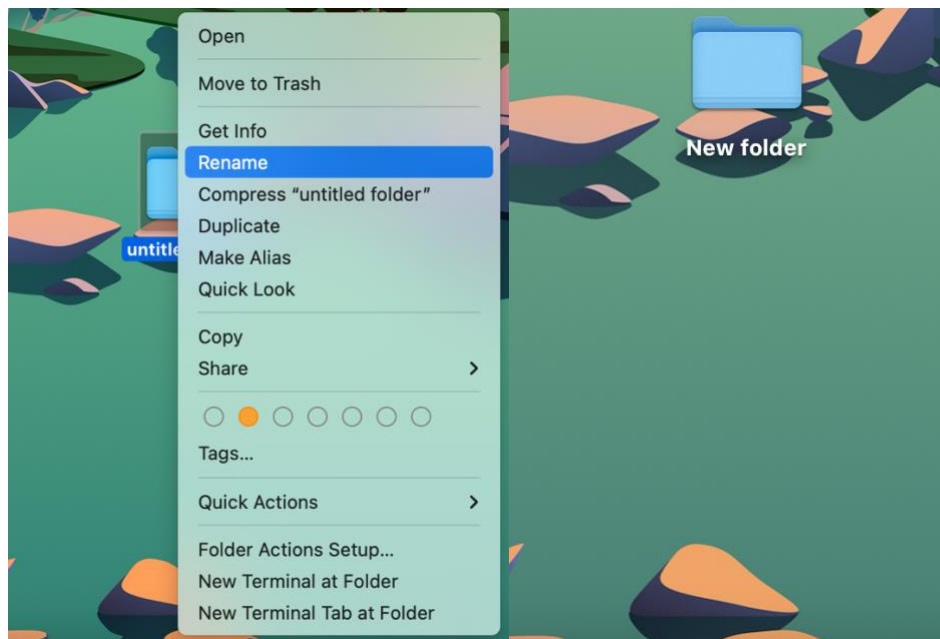

With one click, you can open a new folder everywhere you want. In this example, I created a folder on the desktop.

3. Creation of a file and store it in the created folder

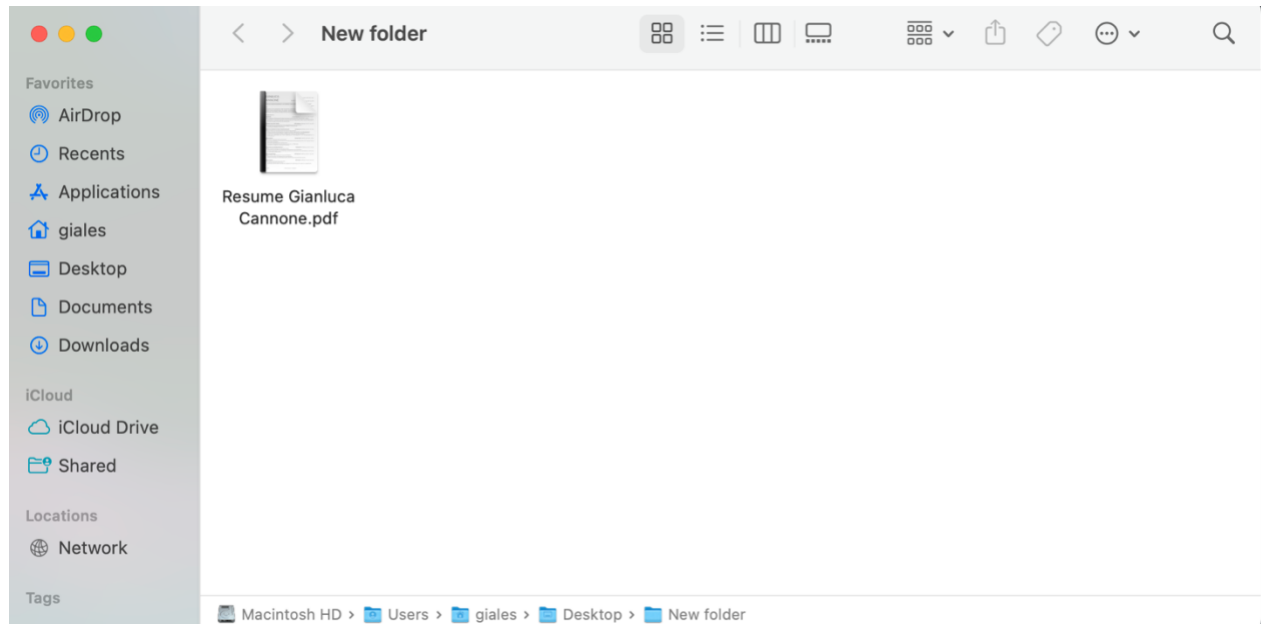

I created a pdf-file “Lebenslauf Gianluca Cannone” and stored it in the created folder (untitled folder).

4. Rename the created folder

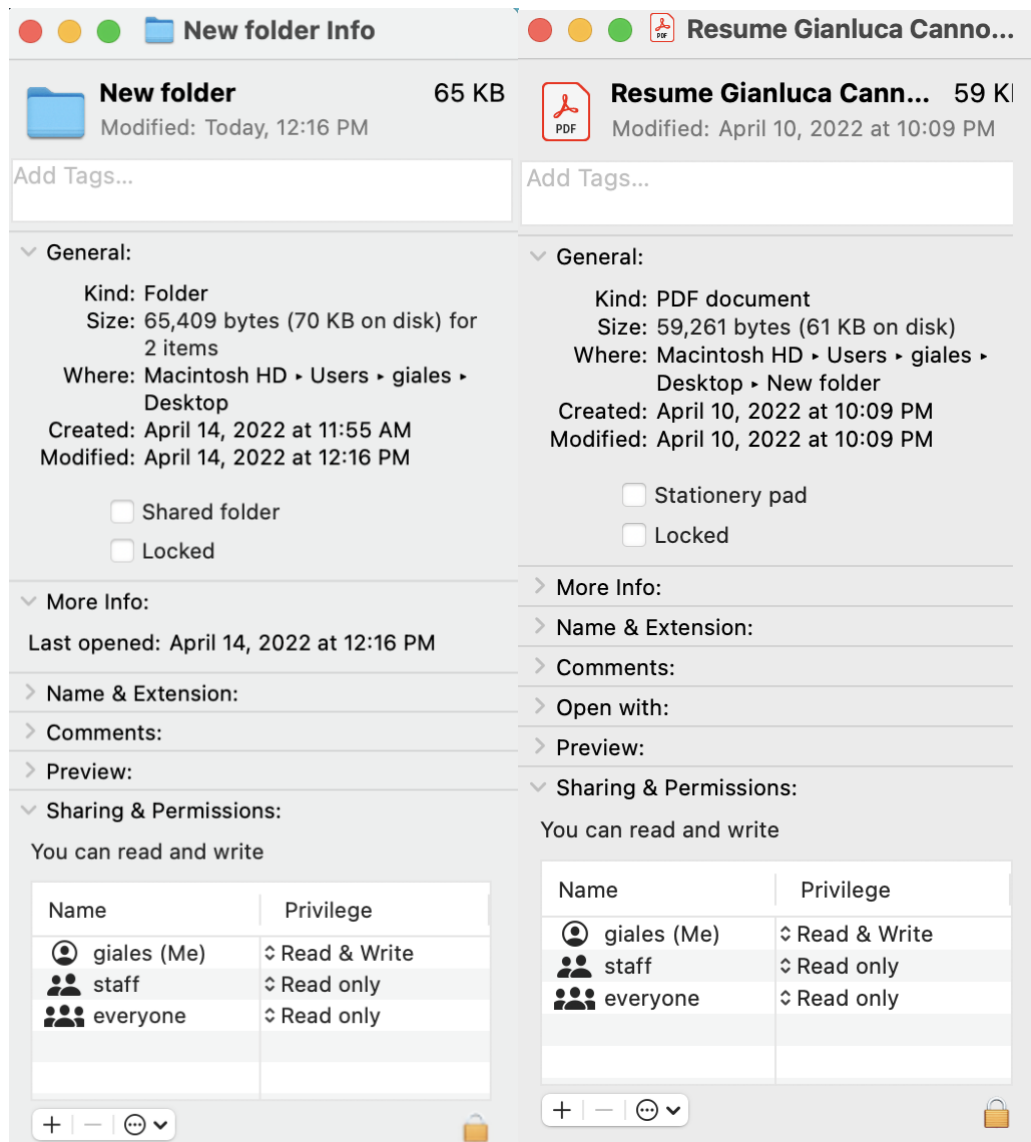

With the setting button, you have the option to rename your folder. The new name of the folder is “new folder”.

5. Rename the created file

The new name of the created file is: “Resume Gianluca Cannone”.

6. Properties of the folder and files

Under the “Get info” option, you can check the properties of any folder and files. You will get any information about it, such as the size, where it is stored and even who can change the items or just read.
